Entradas: número binario de 3 bits con signo en Ca2, A = **Sa a1 a0**

número binario de 2 bits con signo en Ca2, B = **Sb b0**

Posibilidades

Con 3 bits

000	= 0
001	= +1
010	= +2
011	= +3
100	= -4
101	= -3
110	= -2
111	= -1

Con 2 bits

00	= 0
01	= +1
10	= -2
11	= -1

Salidas: No obliga a hacerla con 3 bits, S = Sz z1 z0

Por tanto las soluciones para S serán

 $\mathsf{Sz} = \Sigma_\mathsf{m}(2,3,6,16,17,20,21,23,24,25,26,27,28,30,31) =$

= $\Pi_{M}(0,1,4,5,7,8,9,10,11,12,13,14,15,18,19,22,29)$

 $z1 = \Sigma_m(2,3,5,6,8,9,12,15,21,24,25,28,31)$

 $=\Pi_{\mathsf{M}}(0,1,4,7,10,11,13,14,16,17,18,19,20,22,23,26.27,29,30)$

 $z0 = \Sigma_m(1,3,4,6,9,11,12,14,17,20,25,27,28,30)$

= $\Pi_{M}(0,2,5,7,8,10,13,15,16,18,19,21,22,23,24,26,29,31)$

Si resuelvo con minterminos por ejemplo

Por tanto,

```
Sz = (/Sa \cdot /a1 \cdot /a0 \cdot Sb) + (/Sa \cdot /a1 \cdot Sb \cdot /b0) + (Sa \cdot /a1 \cdot Sb) + (Sa \cdot a1 \cdot a0) + (Sa \cdot a1 \cdot /b0) + (Sa \cdot a0 \cdot Sb \cdot b0)
z1 = (/Sa \cdot /a1 \cdot /a0 \cdot Sb) + (/Sa \cdot /a1 \cdot Sb \cdot /b0) + (a1 \cdot /Sb \cdot /b0) + (a1 \cdot /a0 \cdot /Sb) + (/a1 \cdot a0 \cdot /Sb \cdot b0) + (a1 \cdot a0 \cdot Sb \cdot b0)
z0 = (a0 \cdot /Sb \cdot /b0) + (a1 \cdot /a0 \cdot b0) + (/Sa \cdot /a0 \cdot b0) + (/Sa \cdot a0 \cdot /b0) + (/a1 \cdot a0 \cdot /b0) + (/a0 \cdot /Sb \cdot b0)
```
